Who We Are

MFC is a leading fabricator of metal, industrial and hydraulic hose, fittings, and formed tube products.

We market our products throughout North America to various industrial and commercial customers. Founded in 1969 as manufacturer of metal hose assemblies, MFC has continually expanded our product offering in an effort to become a complete supplier of fluid and exhaust conveyance products.

StandardFlex

Description: StandardFlex is a medium weight, medium flexibility hose that works well in most metal hose applications

Construction: Annular hose construction

Hose Material: 321 stainless steel
(other alloys available)

Braid Material: 304L stainless steel
(other alloys available)

Description: Superflex is similar in design to StandardFlex but has more corrugations creating a much more flexible hose

Construction: Annular hose construction

Hose Material: T321 stainless steel
(other alloys available)

Braid Material: T304 stainless steel
(other alloys available)

Technical Information

Temperature Adjustment Factors

In general, the strength and therefore the pressure rating of metal hose decreases as the temperature increases. Thus, as the operating temperature of a metal hose assembly increases, the maximum allowable working pressure of the assembly decreases. The pressure ratings shown in the specification charts for corrugated hose are valid at 70°F. Elevated service temperatures will decrease these pressure ratings by the factors shown in the following chart. What also must be considered is the maximum working temperature of the end fittings of the hose and their method of attachment.

Temperature	304/304L Stainless Steel	316L Stainless Steel	321 Stainless Steel	Carbon Steel	Monel	Bronze
70	1.00	1.00	1.00	1.00	1.00	1.00

Fitting Options

Male Pipe Nipple

Alloys: 304 and 316 Stainless Steel, Carbon Steel
Sizes: 1/8" thru 8"
Schedules: 40 and 80

Female Union

Alloys: 304 and 316 Stainless Steel, Carbon Steel, Malleable Iron, Brass
Sizes: 1/4" thru 4"
Class: 125#, 150#, 300#

Hex Males

Alloys: 304 and 316 Stainless Steel, Carbon Steel, Brass
Sizes: 1/4" thru 4"

37 degree JIC

Alloys: 304 and 316 Stainless Steel, Carbon Steel
Sizes: 1/2" thru 2"

Female Coupling

Alloys: 304 and 316 Stainless Steel, Carbon Steel
Sizes: 1/4" thru 4"
Class: 150# and 300#

Fixed Flange

Alloys: 304 and 316 Stainless Steel, Carbon Steel
Sizes: 1/2" thru 12"
Class: 150#, 300#

Fitting Options

Floating Flange

Alloys: 304 and 316 Stainless Steel, Carbon Steel
Sizes: 1/2" thru 12"
Class: 150#, 300#

Copper Sweat Ends

Alloys: Copper
Sizes: 1/2" thru 3"

Groove End

Alloys: 304 and 316 Stainless Steel, Carbon Steel
Sizes: 1" thru 8"
Schedule: 40

Female Ground Joint

Alloys: Malleable Iron
Sizes: 1/2" thru 4"

Tube Ends

Alloys: 304 and 316 Stainless Steel, Carbon Steel
Sizes: 1/8" thru 8"
Wall Thickness: Multiple

Tri-Clamp

Alloys: 304 and 316 Stainless Steel
Sizes: 1" thru 3"

Cover Options

Abrasion Cover

This light weight hose protection option is great way to keep external abrasion from the stainless steel braid. The sleeving comes in a variety of sizes to protect almost any size hose.

Fire Sleeve

If the hose assembly is going to convey hot materials, fire sleeve is an excellent way to protect the handler from potential burns. It can also be used to prevent heat loss.

Armor Guard

An armor jacket can be added to the outside of the hose to protect it from extreme external abrasion. The outer jacket can also help protect the hose from over-bending, impact, and thermal damage.

Spring Guard

Spring guards are commonly added to the exterior of metal hose assemblies to prevent over-bending or to protect the hose from external abrasion. Custom springs can be made to meet any size or requirement.

Jacketed Assemblies

A jacketed assembly is a hose within a hose that is often used when the primary media needs to be kept at an elevated or cryogenic temperature. These assemblies are custom produced based on the specific requirements of the application. Please contact MFC to discuss options, sizes, and pricing.

Part Number Configurator

When Quality Matters

Building quality products at competitive prices was our mission statement when MFC was founded in 1969.

Over the last four decades that goal has only intensified. Today, MFC is proud to be certified as an ISO company, a certification few hose fabricators can claim.

Testing

Every corrugated metal hose that is used for a liquid application is tested prior to shipment. MFC's standard testing process consists of filling the assembly with compressed air and then submerging the entire assembly under water. Upon request, assemblies can also be hydrostatically, nitrogen, or vacuum tested.

Cleaning

Although every care is taken to produce a clean assembly, some applications require a higher level of cleanliness. For those instances, MFC can have your assembly cleaned and degreased or oxygen cleaned.

Certification

When requested, MFC can provide certification of material composition. Additionally certification of testing or conformance to a specific customer requirement can also be provided.

Packaging

All assemblies will be shipped in a manner to assure they arrive safely to you. Crating, staking, thread covers, caps, and anti-contamination bags are all options that are available to our customers.
